Watts Valves with Press Connections

Watts now offers a comprehensive line of valves with press connections for light commercial and residential applications. They can be used for both new construction and renovation projects as an alternative to a solder joint.

The technology provides a way to:

- Join copper tubing to brass and bronze valves more efficiently than with soldering
- Save on time and labor costs (compared with soldering)
- Create a strong, reliable, watertight seal
- Avoid soldering issues, such as fire, smoke and fire watches (often required when soldering is performed)
