**Series 601**  
**Air Gap Drain for use with**  
**MasterSeries® Reduced**  
**Pressure Assembly**

2½" – 10"

**NOTICE**

This air gap drain can be attached directly to the flood sensor on the relief valve.

FEBCO Series 601 is constructed of coated aluminum. The air gap drain kit is designed for installation on the relief valve of MasterSeries® reduced pressure assemblies, 2½" to 10". Four-inch drainage piping can be attached to drain, creating a system that catches and removes minor relief valve discharges resulting from pressure fluctuations and/or minor check valve fouling.

**NOTICE**

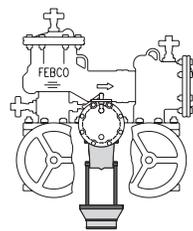

The gap drain is not designed to catch the maximum discharge possible from the relief valve. The installation of FEBCO air gap with the drain line terminating above a floor drain can handle any normal discharge or nuisance spitting through the relief valve. However, floor drain size may need to be designed to prevent water damage caused by a catastrophic failure condition. Do not reduce the size of the drain line from the air gap fitting.

**Features**

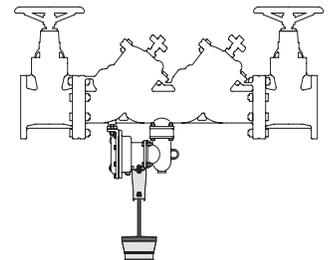

- Nozzle design directs flow directly into funnel, reducing side spray
- Funnels minor relief valve discharges into drains
- Lightweight for easy installation
- Coated for corrosion resistance
- 4" funnel outlet can accept a hubless pipe coupling for simple drain pipe installation
